Peach

Peach is a Canadian born, UK based DJ & Producer. Her sets have become beloved worldwide for the emotional range and bubbly energy that radiates directly from her person & her musical choices. Her style is classic, yet steeped in modern flair, she inhabits a continuum of sound that can be defined by the uplifting energy that is felt through her sets. She cannot be defined by genre because her music touches on many - all of which sit between the house and techno spectrum. Tech house, proto house, bleep, tribal, and ambient techno often come to mind, yet it is still a specific kind of energy she creates which cannot be interpreted by genre alone.

Her debut EP “Galaxy Girl” on Shanti Celeste & Gramrcy’s Peach Discs was a distinct and intentional expression of her dancefloor-ready technicolour tech house. In 2022, she launched her own label Psychic Readings - an output she uses for exploring her own sound with each release. The music is a modern take on the various themes throughout dance music history, yet it remains unique in its sound - the result is familiar inspirations but a refreshing outlook.

Peach finds herself most at home in the dark rooms of smaller scale clubs - such as Berghain’s Panorama Bar in Germany, De School in Amsterdam, Fold in London, or Nowadays in New York - but she is no stranger to the larger stages across the world. She has played at major festivals worldwide such as Glastonbury, Sonar, Primavera, Dekmantel, Melt Festival, Dimensions, Rainbow Disco Club, Pitch Festival and many more. Her monthly NTS Radio show has been running for over 6 years, where she explores an array of music not necessarily focused on genre, but always with a thread of sonic continuity between it all.

A truly honest musical voice and lover of the feedback loop between dancer & DJ, Peach’s output always feels confidently transmitted from her soul. Her inextinguishable lust for life is inspired by the genuine connections between moments, people & music - bestowing a loving gift of dynamism, passion & adventure into the universe wherever she may go.
